SUMMARY

Robotics and automation engineer (M.Eng., UC Berkeley) with 3+ years at Apple building high-precision robotic test systems, now scaling teleoperation data collection for VLA model training at RoboForce. Hands-on across ROS 2, motion planning, teleoperation systems, and hardware prototyping. Seeking roles in robot integration, test automation, and robot learning. Open to robotics and automation roles in the South Bay.

EXPERIENCE

Data Operations Shift Lead

RoboForce

Apr 2026 – Present

Milpitas, CA

- Scaled VLA training data collection to **1,000+ demonstrations/day**, leading **20+ operators** across **10+ robotic stations**.
- Re-engineered station hardware and software (**GELLO, UMI, VR**), tripling data collection efficiency (**+200%**).
- Served as the key link between AI engineers and operators, **building SOPs** and systems that turn model requirements into consistent, high-quality data.
- Developed **internal tools** for reporting, onboarding, training, and issue tracking, eliminating repetitive work.

Safety Test Automation Engineer

Apple Inc.

Aug 2021 – Jun 2024

Cupertino, CA

- Developed **automated robotic testing systems** for product safety certification, reducing end-to-end testing cycles from **75 days to 2 days** while achieving ± 0.1 mm positioning precision.
- Engineered a **contact-sensing end-effector** attachment to **eliminate undetectable system errors**, significantly **increasing test reliability by 30%**
- Developed a Python curve-fitting tool modeling test behavior across 2,700 configurations with **90% accuracy**, enabling engineers to predict cycle completion and plan next setup timing.
- Rapidly prototyped **3D-printed** test fixtures and **CNC-machined** components in **Siemens NX**, reducing **hardware setup time by 96%** through optimized design-for-manufacturing (DFM).

PROJECTS

Search & Rescue Robot | *Python3, ROS 2, SLAM, RViz, OpenCV, Nav2*

Aug 2024 – May 2025

- Led an autonomous ground robot for disaster response with **SLAM, A* path planning, and OpenCV** object detection for real-time mapping, localization, and perception.
- Integrated multi-sensor data streams (**LiDAR, camera, IMU**) for robust perception in dynamic environments.
- Owned project planning/timelines, mentored teammates in **ROS 2** workflows, and guided architecture decisions to the first deployment.

EDUCATION

University of California: Berkeley

Master of Engineering in Mechanical Engineering: Control of Robotic and Autonomous Systems

Berkeley, CA

May 2025

University of California: San Diego

Bachelor of Science in Mechanical Engineering with Specialization in Controls and Robotics

San Diego, CA

Jun 2021

TECHNICAL SKILLS

Programming & Software: Python, C++, MATLAB, ROS 2, Git, Linux, Arduino, PyTorch, Webots

Mechanical & CAD Tools: SolidWorks, Siemens NX, Autodesk Inventor, 3D Printing, CNC, DFM

Robotics & Algorithms: SLAM, Path Finding (Nav2), Motion Planning (MoveIt2), Computer Vision (OpenCV)
